Service Bulletin #GRS-6-7/09  
Machine Type - Gang Rip Saw  
Subject - Improved Dust Collection

## ***Reduce Down Time and Clean-Up Time with Improved Dust Collection***

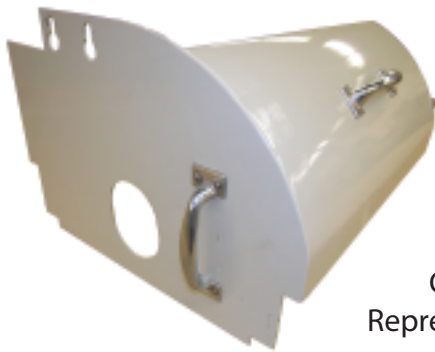

Our records indicate that you own a Mereen-Johnson Model 312-DC/SR "Select-A-Rip" Straight Line Multiple Rip Saw. This notice is to advise you that an accessory dust baffle has been designed that provides enhanced dust collection for your machine.

A short video showing this device, it's installation, and the improved collection capability can be viewed at the following Youtube internet link: <http://www.youtube.com/watch?v=lzgj8W6p4cE>

This new accessory has been made standard equipment on all new Model 312-DC/SR machines manufactured after May, 2009. The baffle is available for purchase in the form of a retrofit kit for installation on existing machines in the field.

This retrofit kit includes a new infeed bed plate rail equipped with integral deflector, new baffle assembly, and two mounting brackets. This retrofit kit is available at an introductory price of \$ 1,000.00, FOB Webster, SD.

This new system will greatly enhance dust collection efficiencies, reducing the amount of residual dust which can accumulate in and around the machine during operation.

The baffle assembly is arranged for quick installation and removal to facilitate fast machine access and set-up times.

Call today to speak with a Mereen-Johnson Customer Service Representative for more information on this baffle system can improve your operation.

For further information on this or any other concern, contact your Mereen-Johnson Customer Service representative at 1-888-4MJ-SAWS (465-7297). Additional information is available in your operations manual. If you do not have an operations manual for your machine, contact your Customer Service representative to order a replacement.
