

MEREEN-JOHNSON

Door Sizer Quality Assurance Program

Mereen-Johnson has created a Quality Assurance Program providing critical monitoring maintenance schedules, detailed machine inspections, and classroom instruction that focus on: Parts inspections, maintenance, safety training, sander head set-up, machine set-up, and recommended spare parts inventory. We'll also provide a final report on machine condition, an action plan for the issues we find, and evaluation of operator/maintenance personnel knowledge.

What We Do:

Detailed machine inspection, classroom training seminars, hands on machine time with operators and maintenance personnel, written summary of findings, and detailed action plan.

From an economic and safety perspective there are meaningful benefits to gain by adopting a more comprehensive approach to proper machine maintenance and operator training.

Results You Get:

- Improved machine reliability
- Fewer potential breakdowns
- Less down time
- Increased operating efficiencies
- Better machine performance
- More skilled operators
- Tighter tolerances
- Better safety practices
- Fewer rejects
- Better return on your investment
- More profits
